

Operational intelligence Platform

Because every second counts

ClearPriority's Real-Time Operational Intelligence Platform enables decision-makers to respond to changing business conditions by providing them with real-time alerts and insight, so they may take meaningful decisions while it still matters

Business Need

The pace of business is forcing enterprises to react ever more rapidly to changing business conditions and customer requirements. A responsive business needs to be event-driven to monitor massive volumes of data that flow through applications, websites, email systems, and various sensors and devices. Operation managers, in particular, require real-time access and insight into this event data for better decision-making.

The ClearPriority Intelligence Platform

Clear Priority Intelligence is an open and general-purpose continuous monitoring technology, The ClearPriority Intelligence Platform makes it easier to manage a complex and distributed environment. It consolidates risk-related data from multiple network, platform and application sources. Near real-time data extraction, transformation and correlation capabilities let you keep tabs on operational activity.

Critical alerts

Features

- **Open Architecture** - ClearPriority's open, application-independent infrastructure provides unique flexibility for monitoring high-impact risks and anomalies across both business and IT environments.
- **State of the art intelligence** – Our correlation engine is based on ground breaking research and advanced mathematical concepts to let you correlate data across complex and dynamic systems
- **Business level modelling** - An intuitive, event-based graphical notation lets you express business and risk situations in a natural and straightforward manner without IT support.

A Business Friendly Environment

ClearPriority's Development Studio - reduces the effort needed to create new monitoring applications. An intuitive, event-based graphical notation lets you express business and risk situations in a natural and straightforward manner.

Simple modelling

For example, you can rapidly define new sources and rules, and implement controls in the form of real-time alerts and Key Performance and Risk Indicators (KXIs) without IT intervention.

Who will benefit

Intended for business managers who make operational decisions, ClearPriority is a real-time operational intelligence platform. It enables non-technical users to rapidly create customized monitoring applications that provide up-to-the-moment visibility into information.

ClearPriority's new generation of event monitoring technology enables high-throughput, low-latency analytics through advanced dashboards and alerts, enabling real-time insight into business operations.

Unlike existing technologies, such as Business Intelligence (BI) and Business Activity Monitoring (BAM) that provide delayed or narrow operational data analysis, ClearPriority delivers visibility into what is happening, as it happens. Organizations can understand their business opportunities and risks within shrinking decision windows:

- Operation managers can visualize, analyze and act in real time on operational data originating from a wide variety of operational data sources.
- Real-time information is provided "in context", based on a specific manager's goals and objectives.
